EDUCATION

University of Mumbai

B.Tech in Computer Engineering

India

June 2021 – June 2025

EXPERIENCE

Ellenox

Fullstack Developer

June 2025 – March 2026

- Led the **architecture and delivery** of **Capturely**, a real-time virtual photoshoot platform for multiple concurrent sessions, built on **React Native (Expo)**, **LiveKit (WebRTC)**, **Tailwind CSS**, **Zustand**
- Delivered complex frontend modules for Therhappi, a hospital/therapy management system, developing multi-page patient and therapist workflows for appointments, patient records, payment gateway, online Therhappi and therapist operations with **React.js**, **Tailwind CSS**, **Redux Toolkit**, and **optimized UI performance**

AcadeEasy

Fullstack Developer Intern

Feb 2025 – April 2025

- Drove the **frontend infrastructure build** of an **AI-powered professional networking platform**; worked on AI systems for **profile relevance scoring**, and improving load times by **35%**.
- Redesigned the backend as a **microservice architecture** with isolated **auth**, **content**, and **analytics services**; containerized and shipped via **Docker + GitHub Actions**, reducing deployment overhead by **50%**.

Loop of Infinity

Frontend and Blockchain Developer Intern

April 2023 – October 2024

- Architected and shipped the DeFi product**, onboarded **1,000+ users**, processed live token sales generating **\$20K+ in revenue**, and drove active staking on Polygon using **React**, **Next.js**, **Node.js**, **GSAP**.
- Developed Staking, Vesting, Token Sale, liquidity pool Dashboards, and **Solidity** smart contracts (Staking, Vesting, Token Sale) via Ethers.js.

PROJECTS

ReviewPilot (AI Code Reviewer) | *Next Js, Tailwind, Node.js, TypeScript*

[Live](#) | [GitHub](#)

- Built an **AI-powered GitHub code reviewer** that automatically analyzes pull requests and posts **review comments** for bugs, code quality, performance, and maintainability improvements.
- Implemented **event-driven arch.**, **webhooks**, and **asynchronous workers** to process PR events, parse changed files, and generate intelligent review feedback at scale using **LLM APIs and RAG**.
- Designed a **review dashboard** with repository management, containerized services using **Docker**.

Relocate AI | *Node, React, MongoDB, Firebase, Gemini API*

[Live](#) | [GitHub](#)

- Built an **AI-driven relocation platform** to recommend neighborhoods, homes, and nearby places based on **budget**, **commute**, **lifestyle**, and **social preferences**.
- Developed a **Flask + MongoDB backend** for personalized recommendations, user profiles, and location intelligence; built an **interactive React map UI** for neighborhood visualization and place discovery.
- Implemented a **Smart Relocation Bot** using **Firebase**, **Gemini API**, and **React** to help users discover local communities, events, and meetups, with **authentication and real-time sync** across devices.

AWARDS, HACKATHONS & LEADERSHIP

Winner – CodeBits 3.0 Hackathon (2025) | [GitHub](#)

Winner – EthGlobal HackFS | [Showcase](#) | [GitHub](#)

Finalist – Web3 INIT | [GitHub](#)

President, ASCEE Club (June 2023 – June 2024)

Lead, Google Developer Students Club (June 2023 – June 2024)

Relocate AI – AI relocation platform

ArtQuire – NFT marketplace on Polygon

Hospital D-App – blockchain medical records

SKILLS

Core: React.js, Next.js, React Native, Node.js, TypeScript, Tailwind CSS, Zustand, Redux, Python

Backend: Express, MongoDB, PostgreSQL, Supabase, Prisma

Devops: AWS, Docker, GitHub Actions, Redis

AI & Automation: OpenAI, Gemini, RAG, Gemini, n8n
